

Brand Name: Omni-Cam

Functioning: Real-time activity detection automated processing.

This technology will help recognizing the activity being initiated with the control structure in re making a decision for a particular activity.

For example:

Turning the lights off if cam detects the person sleeping.

Turning the fan on if the person's body temperature is high.

and so on...

Tech Stack:

1. Python - Application development, Machine learning
2. Django - Python Web-dev implementation
3. React.js - Component based website development
4. MongoDB - Database processing handling scaler
5. Redis - Faster optimisation of the data
6. Docker - Universal convenience for prequalification of prerequisites
7. Nginx - For port automation

OBJECT DETECTION

Detected Object: person, person
